

SUMMARY

Senior Frontend Engineer with 5+ years shipping production React / Next.js / TypeScript in FinTech (Grip) and dev-tools (DeepSource). Strongest signal is measurable performance and quality work – 60% Lighthouse gain, 50% smaller bundles, 90% memory cut, 70% faster static analysis. Owns features end-to-end, sets frontend standards, and mentors through doc-heavy code review. Active open-source contributor (19 merged PRs to OpenStatus). **Available immediately.**

WORK EXPERIENCE

Independent — Open Source & Technical Writing

Jan 2026 - present

- **Architected the importers subsystem (#1933)** for OpenStatus – a reusable, typed `Importer` framework (source-schema mapping, rate-limited fetchers, idempotent upserts, UI progress reporting) that let later integrations plug in cleanly; shipped Atlassian StatusPage migration as the first, with Betterstack and a maintainer-built Instatus importer following on the same abstraction.
- Shipped **19 merged PRs** to `openstatusHQ/openstatus` (Next.js + TypeScript monorepo) over four months: features (Betterstack importer, Telegram-via-QR, full status-page i18n), a zod v3 to v4 refactor across 99 files, a Server Components refresh bugfix, a color-picker performance fix, and a Next.js security update.
- Published technical articles on Core Web Vitals / LCP diagnostics, Next.js Docker build optimization (83% image-size cut), Redis caching (5x production throughput), and a React Native CI/CD pipeline on GitHub Actions.

Grip (FinTech) — Senior Software Engineer

Sept 2023 - Jan 2026

- Led a performance overhaul of the Grip web app: **60% Lighthouse improvement, 50% build-size reduction, and a 90% memory cut** (12–15 GB to under 1 GB in builds) – performance and reliability at scale.
- Authored the team's frontend best-practices guidelines (code splitting, render optimization) and integrated StyleLint into CI, driving CSS / styling errors to zero – set coding standards and raised the bar across the frontend.
- Owned core fintech surfaces end-to-end: RFQ + KYC integration (OBPP), KYC entry-point UX redesign, the Fixed Deposit module, and After-Market Orders 2.0 with Payment Gateway integration.
- Ran A/B tests with weighted experiments and built a cross-browser automation script (Safari localhost + BrowserStack) that cut QA cycle time for the team.

Grip (FinTech) — Software Engineer

Oct 2021 - Aug 2023

- Led the architecture and delivery of a **Role-Based Access Control system** with a typed permission model (NestJS + GraphQL) – a single source of truth across 5+ product surfaces with near-zero privilege bugs.
- Built Commercial Real Estate, Startup Equity, and Securitised Debt Instrument products from the ground up – domain modeling, NestJS APIs, PostgreSQL, React UIs, KYC and payments.
- Shipped a Sales Dashboard for KYC verification and order creation, plus 20+ enhancements to the internal admin tool.
- Lighthouse + SEO optimization that improved search rankings and page-load times.

DeepSource — Software Engineer

Jun 2020 - Aug 2021

- Maintained the JavaScript Analyzer and built **50+ custom issue detectors** with config support, establishing it as a competitive alternative to SonarQube.
- Cut analysis execution time by **70%** (one cache-layer change drove most of it).
- Worked US-HQ async-remote for 14 months: writing-first, doc-heavy PR reviews, owning a flagship feature end-to-end.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C++, Shell, HTML/CSS

Frontend: React 18, Next.js (App Router + Pages Router), React Native, responsive design, web performance, accessibility

UI & Design Systems: Tailwind CSS, shadcn/ui, reusable component libraries, StyleLint, CSS-in-JS

State: Zustand, Redux, React Query

Testing: Playwright, Cypress, Jest, Storybook, React Testing Library

Backend: Node.js, NestJS, GraphQL, REST, PostgreSQL, MySQL, Redis

CI/CD & Infra: GitHub Actions, Docker (multi-stage), AWS (Lambda), ESLint, custom linter rules, Git

PROJECTS & OPEN SOURCE

Open Embed UI – open-embed-ui.vercel.app (solo project) 2026

- Embeddable React widget that renders a developer's merged open-source PRs as live, interactive components – a single script tag, no API keys, no iframes.
- **19 KB gzipped**, isolated with **Shadow DOM** so host-page CSS never conflicts; backed by a Cloudflare Worker edge API with live or static-snapshot (CI-baked) modes.
- Seven themeable layouts (grid, list, timeline, card, marquee, masonry, highlight) with per-token color overrides; per-widget origin allowlists for security.

oclif (Salesforce CLI framework) – Google Summer of Code 2019

- Co-created the linter infrastructure from scratch (TSLint + ESLint) with custom rules enforcing CLI best practices – the kind of standards work the role calls for. oclif now has 9.5K+ stars.

EDUCATION

Amity University Jaipur, India (2016–2020)

- Bachelor of Technology in Computer Science
- CGPA: 7.33/10
